

Report 22-3-21

We have used firebase account which you have given us the credentials

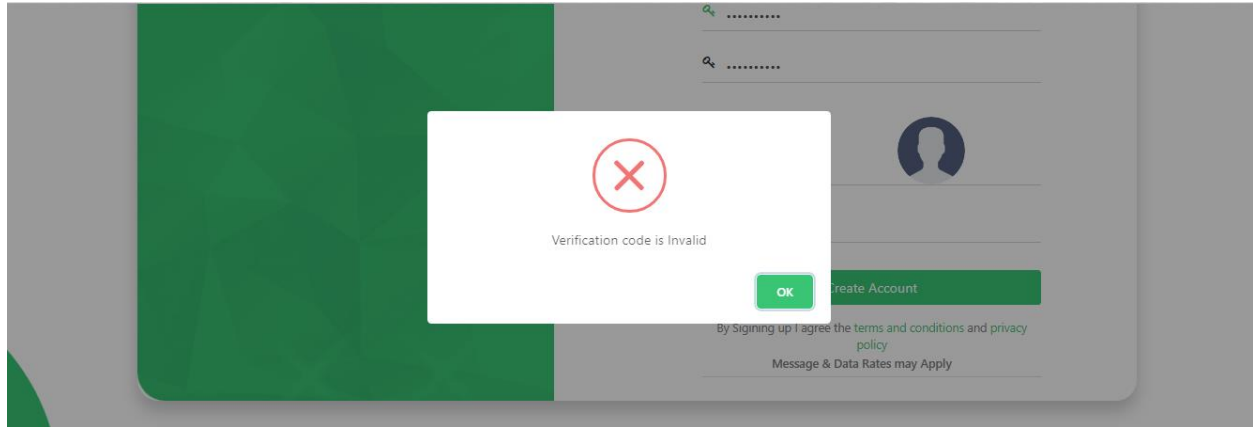

Firebase phone number verification has been integrated only for client

The screenshot displays a registration interface with a green geometric background on the left. The main form area contains a CAPTCHA challenge titled "Select all images with cars" with a sub-instruction "Click verify once there are none left". The challenge shows a grid of nine images. To the right of the grid is a "VERIFY" button. Above the grid, a phone number "+923046118322" is entered. Below the grid, there is an "Upload Avatar" button, a profile icon, a checkbox for "I'm not a robot" with a reCAPTCHA logo, and a "Save" button. At the bottom, there is a disclaimer: "By Signing up I agree the terms and conditions and privacy policy" and "Message & Data Rates may Apply".

Here is the option to enter verification code that was sent on the phone number

The screenshot shows the same registration interface, but the CAPTCHA challenge has been replaced by a verification code entry step. The phone number "+923046118322" is still visible at the top. Below the "Upload Avatar" button and profile icon, there is a field labeled "Enter Verification Code" with a small icon of a phone. A green "Create Account" button is positioned below the code field. The same disclaimer at the bottom is present: "By Signing up I agree the terms and conditions and privacy policy" and "Message & Data Rates may Apply".

Error message will be shown if user enter the wrong / invalid verification number

We have created a chat application for website but we noticed it is not based on firebase but mobile application chat is based on firebase system so it will create issues so we are working to create chat application with firebase so it will be feasible for both mobile application as well as web application

That's why we didn't embed it on live server

Here is the link attached below for created chat system for website
